

Dear Hiring Team,

Senior Product Designer with 15 years designing complex B2B products. At Remuner I designed and shipped a production AI agent, a chat surface where sales reps and managers ask about their commission data and sales plans in plain language. I owned the conversation design, the trust patterns, and what the agent would and wouldn't answer. I use Claude daily, for that agent and for prototyping in Figma Make.

At Abacum, I designed the Dataset Manager, a UI layer that let finance teams configure their JSON-based data without engineering support, after user research surfaced a mismatch between product terms and how teams thought about their data. I standardised the formula syntax across the modeling layer with an engineer. Biorce's clinical data is a different domain, but making complex, rule-governed data legible to the person using it is the same design problem.

Drug development and clinical research are new territory for me. What isn't new is designing for people who need power without being buried in it. Happy to walk through the work: manel-leiva.com.

Best,
Manel
