

Dear Hiring Team,

Senior Product Designer with 15 years designing complex B2B products. I've built two production design systems from scratch. At Remuner I built the token pipeline, Figma to Token Studio to Style Dictionary to a published npm package. The CTO called it the jump from 2010 software to 2020 software.

At Abacum I ran a similar system across five product squads, with a structured issue-reporting process for naming and component proposals. Adoption was tracked by counting components in the codebase, not by feel. I also adapted Remuner's web product into iOS and Android apps, still live in both stores.

I haven't worked in pool or wellness hardware. I have spent years in the same kind of problem: aligning multiple teams around one shared system without slowing them down. Happy to walk through the fit: manel-leiva.com.

Best,
Manel
