Hello Stripe team,

I'm applying to the Global team because its Dashboard work on tax compliance, payment methods and cross-border money is financial configuration that has to stay usable for the people running a business. I designed that kind of product at Abacum and Remuner.

At Abacum, an FP&A platform, I led design and customer testing for Dataset Manager, which turned JSON configuration into guided steps for finance teams. The squad's engineers estimated that standard configuration took about half the previous time. I also proposed moving dimension creation into the open dataset, so users no longer left a setup halfway to create one elsewhere. After it shipped, customers reported faster setup and fewer errors.

At Remuner I was the sole product designer on a sales-compensation platform, covering data integrations, plans, payouts and approvals. I built interactive prototypes with AI tools for users to test, separate from the production app, and I owned the component library and token system, including the translation keys built into the components.
