

Dear Hiring Team,

I applied for this role in June. What has changed since: the full Remuner design system case is now public, with the token architecture, the component audit, and the pipeline evidence. It is at <https://manel-leiva.com/cases/design-system-remuner.html>, and I am applying again with the work visible.

I have built two production design systems end to end. At Remuner, as sole designer: token architecture on Figma variables and a pipeline from Token Studio through Style Dictionary to a published npm package with CI validation. The CTO's unprompted verdict was that the product went from a 2010 app to a 2020 app. At Abacum, the Abax system, a two-tier token architecture adopted across five squads.

Adoption was the design goal at Remuner: ESLint rules enforced token usage, the icon system let engineers self-serve without design handoffs, and governance ran as a monthly meeting. Barcelona hybrid works for me.

Best,
Manel
