

Dear Hiring Team,

I design B2B products where the data is money: sales compensation at Remuner, financial planning at Abacum. At Abacum I designed the Dataset Manager, a UI layer over JSON dataset configuration that let finance teams set up their data without engineering support, and standardised the formula syntax of the modeling layer. Getting complex, dependency-heavy flows right is the work I look for, and payroll is full of it.

Your requirements name design tokens explicitly, which is rare. I have built two production design systems, including the token pipeline from Token Studio through Style Dictionary to a published npm package with CI validation. On the AI side, I designed an agent released to all Remuner customers, where sales reps and managers consult their commission data in plain language.

I am in Barcelona and the hybrid setup works for me. Portfolio: manel-leiva.com.

Best,
Manel
