

Dear Hiring Team,

I build design systems that ship as infrastructure, not as Figma libraries. At Remuner I built the system from scratch as the sole designer: component architecture, Figma variables, and a token pipeline from Token Studio through Style Dictionary to a published npm package with CI validation. The case is live at <https://manel-leiva.com/cases/design-system-remuner.html>.

Before that I built the Abax system at Abacum, a two-tier token architecture adopted across five squads, and co-led the business case that won engineering investment. Design-to-code is where I work by default: the pipeline maps design decisions to implementation, and I enforced adoption with ESLint rules rather than documentation alone.

I have not worked in digital health. I have spent four years in domains with the same shape: dense data and users who depend on precision. Happy to walk through the Evinova fit.

Best,
Manel
