Hello Clio team,

I'm applying for the International Expansion role because it asks for AI-powered workflows in a B2B SaaS product that now has to work in new markets, starting with France. I've shipped an AI agent inside a B2B product and managed the translation keys built into a design system's components. Spanish and Catalan are my native languages.

At Remuner I was the sole product designer on a sales-compensation platform. I designed and shipped its conversational AI agent, owning the conversation design, answer formats and trust patterns. I also set the role-based context, so managers could ask about their team's plans while reps saw only their own. Capability decisions were shared with the founders and engineering. I owned the component library and token system too, including the translation keys in SimpleLocalize.

Before that, at Abacum, an FP&A platform, I led design and customer testing for Dataset Manager, which turned JSON configuration into guided steps for finance teams. The squad's engineers estimated that standard configuration took about half the previous time. I also co-led the business case for Abax, the design system, and worked on it across five squads.

AI agent case: manel-leiva.com/cases/ai-agent

Best,

Manel
