Hello Powens team,

I'm applying because the role puts one designer on Powens' B2B platform and the regulated flows end users go through. I've designed data connections and configuration for finance teams, and at Remuner I was the only designer on the product.

At Abacum, an FP&A platform, I worked in the Integrations squad and led design and customer testing for Dataset Manager, which turned JSON configuration into guided steps for finance teams. The squad's engineers estimated that standard configuration took about half the previous time.

At Remuner I was the sole product designer on a sales-compensation platform, from data integrations to payouts and approvals. With no design team yet, I set up a weekly design review, biweekly refinements with engineering and onboarding documentation for whoever joined next. I owned the component library and tokens, brought the colours in use to WCAG AA contrast, and took the responsive product to iOS and Android as webview apps.
