

Manel Leiva

Senior Product Designer

SUMMARY

Senior Product Designer specialising in fintech B2B SaaS, designing for users where data accuracy and financial consequences are real. At Abacum I worked across an FP&A platform: a formula expression interface for financial model creation, a self-serve dataset manager for enterprise finance teams, and design system standardisation across squads. At Remuner I owned product design end-to-end as the sole designer: real-time commission tracking, multi-step approval workflows, role-based permission systems, and an AI agent for sales reps and managers that shipped. I work well in fast-moving environments where the product is complex and the user base has genuine expertise.

EXPERIENCE

Senior Product Designer

Remuner

May 2024 - Mar 2026 · Barcelona, hybrid

Owned product design across the full platform as the sole designer. Designed real-time commission tracking dashboards for multiple user roles: sales reps, managers, and finance executives. Each role needed different data density, different aggregation levels, and different decision triggers from the same underlying data source.

Designed and shipped an AI agent for sales reps and managers. Was developing the admin-facing version before leaving: a natural language interface that let admins build and configure compensation plans without manual configuration.

Designed multi-step approval workflows, role-based permission systems, and data mapping flows for complex sales incentive logic.

Built the design system in parallel with shipping product. Component library, token architecture, and an icons repository engineers could pull without involving design.

Senior Product Designer

Abacum

Jan 2022 - Apr 2024 · Barcelona, hybrid

Designed the modeling layer syntax: a formula expression interface for FP&A model creation. Expert users building financial models where a wrong formula has real consequences. Standardised syntax across the modeling layer and unlocked the follow-on editor suggestions project.

Barcelona

Skills

Product Design: complex workflow design, data-dense interfaces, fintech platforms, AI-powered UX, user research, prototyping, usability testing

Design Systems: Token Studio, Style Dictionary, Storybook, Chromatic, component libraries, token architecture

Tools: Figma, Miro, JIRA, GitHub

Domain: fintech, FP&A, B2B SaaS, sales incentive management, banking adjacent

Languages

Spanish (native)

Catalan (native)

English (professional)

First designer on the integrations and datasets squad. Took the dataset manager from a JSON editor used only by the implementation team to a self-serve interface where enterprise finance teams could connect data sources, define transformations, and configure column types independently. Research moved from expert internal users outward to end users as the interface matured.

Contributed to design system standardisation across squads: token architecture, component library structure, and the governance that kept Figma aligned with production through multiple releases.

Senior UX Designer & Co-founder

Kings of Mambo

Sep 2010 - Nov 2021 · Barcelona, hybrid

Co-founded and ran a UX studio for over a decade. Most complex projects: KYMCO Spain's backoffice, vLex Iceberg (a legal document repository), e-commerce builds. Most work meant learning an unfamiliar domain fast and working close enough to engineering to know what I was asking developers to build.

EDUCATION

Higher National Diploma in Computing Design and Multimedia

ESI (Escuela de Sistemas Informáticos)

2002
